Experiment – 16

Cloning of a Virtual Machine and Testing the Cloned VM Using VMware Workstation

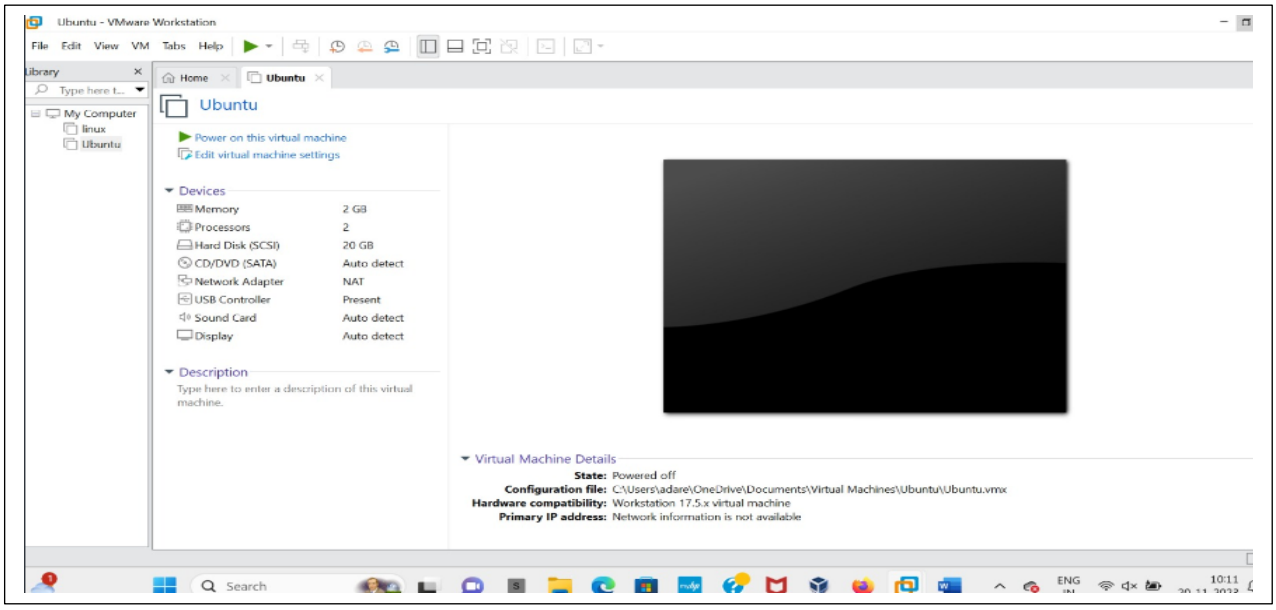

Aim

To create a clone of a virtual machine using VMware Workstation and test the cloned virtual machine by starting and verifying its operation.

Procedure

1. Open VMware Workstation on the Windows host operating system.
2. Select the Ubuntu virtual machine that needs to be cloned.
3. Ensure that the virtual machine is powered off.
4. Click VM → Manage → Clone to open the Clone Virtual Machine Wizard.
5. Select the current state of the virtual machine or an existing snapshot as the cloning source.
6. Choose the required clone type: Create a full clone or Create a linked clone.
7. Enter a name for the cloned virtual machine, such as Ubuntu-Clone.
8. Specify the location where the cloned virtual machine files should be stored.
9. Click Finish to begin the cloning process and wait for it to complete.
10. Verify that the cloned virtual machine appears in VMware Workstation.
11. Select the cloned VM and click Power on this virtual machine.
12. Log in to the guest operating system and verify that it runs successfully. Confirm that the original virtual machine remains available independently.

Output:

Result

Thus, a virtual machine was successfully cloned using VMware Workstation, and the cloned virtual machine was started and tested successfully.
