Experiment – 14

Creation of a Virtual Hard Disk and Storage Allocation Using VMware Workstation

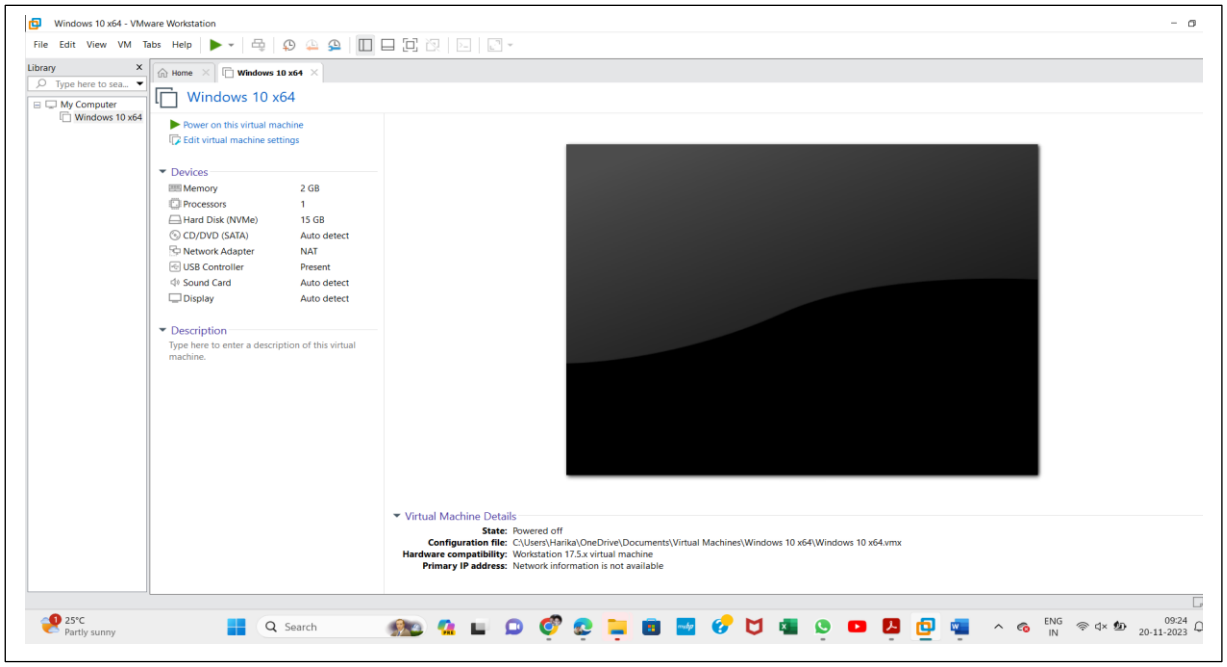

Aim

To create a virtual hard disk and allocate storage to a virtual machine using VMware Workstation.

Procedure

1. Open VMware Workstation on the Windows host operating system.
2. Select the virtual machine and click Edit virtual machine settings.
3. Click Add to add a new hardware device.
4. Select Hard Disk from the device list and click Next.
5. Choose the required virtual disk type, such as SCSI, and click Next.
6. Select Create a new virtual disk and click Next.
7. Enter the maximum disk size as 15 GB or the storage capacity specified in the experiment.
8. Select Store virtual disk as a single file or Split virtual disk into multiple files.
9. Click Next and specify the virtual disk filename and location if prompted.
10. Click Finish to create the virtual hard disk.
11. Verify that the newly created hard disk appears in the Virtual Machine Settings window.
12. Power on the virtual machine and verify that it operates correctly.

Output:

Result

Thus, a virtual hard disk was successfully created and storage was allocated to the virtual machine using VMware Workstation.
